## LYNX OPEN IPSC

BLACK NICKEL

## IPSC Winning

The brand new **Caracal Lynx IPSC Open Class** pistol has already collected a good number of IPSC National Matches medals in Italy, even before the official launch. 20 rounds, available in 9x19 Luger, 9x21 IMI and .38 Super Auto calibers, the Lynx Open Class bears a brand new, mapped modular Red Dot mounting system, to allow any human hand to perfectly control the gun.

## LYNX COMPACT

DESERT TAN

## The Unique Lynx Compact

With the **Caracal Lynx Compact** we break a world record: the first "2011" type of high capacity, Colt-Petter modified System with 4 inch barrel, single locking lug and flat top slide ever produced. Available in all popular calibers including .40 S&W, the Lynx Compact can be delivered as a true "operator's" side weapon, including the extended 20 rounds magazine (9mm and .38 SA).

## LYNX COMPACT

### BLACK NICKEL

## The Black Nickel Finish

The Caracal Lynx high capacity new line of pistols can be delivered with the unique **Black Nickel**, hardwearing finish, either as a “duotone” option, or as a 100% coating, including steel and alloy parts.

Small levers can be Black Oxide, barrel and trigger can be either TIN or DLC coated, for flawless and enduring performance, both for the sports shooter and the operator alike.

## LYNX SPORT

### DUOTONE

## Special Editions

The Carcal Lynx is the perfect **Custom Gun**: as the example in this page shows, any custom Cerakote™ colour or finish can be obtained, creating endless suggestions. In this page: a special Gold and Black Duotone edition, with DLC coated barrel, firing pin, sear and hammer.

## TECHNICAL DATA

### CARACAL LYNX - KEY FEATURES

- 1- Flat slide top, single barrel locking lug, for lower sight line to barrel axis.

## LYNX SPECIAL EDITIONS

### UAE 50th Anniversary

50 Gold engraved and enamelled, magnificent commemorative pistols of the United Arab Emirates 50th Anniversary since the Foundation were delivered in 2021. Serial Numbers **UAE01** to **UAE50**.

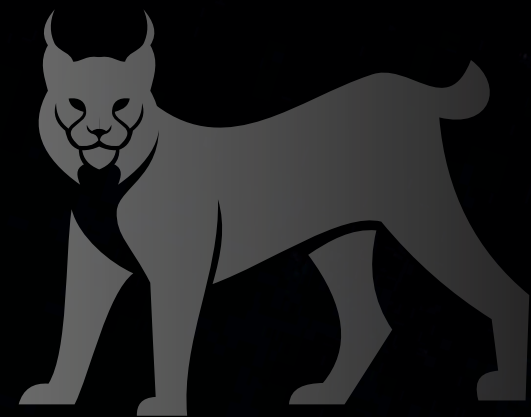

## Spirit of the Emirates

Richly engraved in 24 Ct, Gold by Italian Master Engraver Stefano Pedretti, with a commemorative calligraphy by Master Calligrapher Amjed Rifaie, only 5 pieces of this magnificent pistol were made for official UAE Government State Gifts to Presidents and other high ranking Officials.

CARACAL

The fully machined Caracal Lynx barrel is hardened and Tin-Coated for maximum carrying resistance, smooth action and great enduring looks over time.

## LYNX SPORT Black Nikel

The Caracal Lynx uses the brand new, high capacity multicaliber and Stainless Steel proprietary Caracal-XDB magazine. Available with either Polymer or Hard Coat-Aerospace Alloy floorplate, it holds 17 rounds for 9x19, 9x21 or .38 Super Auto and 13 rounds for .40 Smith & Wesson.

The high speed, Tin-Coated hammer of the Caracal Lynx: accurate, predictable and reliable key component of the new Caracal Lynx pistol, featured on all models.

All the same, the Ergal 7075 adjustable Trigger is machined from solid and Gold-anodized, to complete an aggressive look of the whole pistol.

The fully integral ambidextrous safety levers bear a low yet functional profile, for competition action as well as for operators, when wearing the gun with ordinary apparel and clothing.

In the picture above, the generous magazine well integral to the Caracal Lynx grip, entirely made from one single slab of Ergal 7075 aerospace alloy.

The fully Tin-Coated barrel of the Caracal Lynx includes the feeding ramp: this is a key feature of the new pistol, ensuring super fast and flawless feeding of cartridges bearing unjacketed or uncoated bullets.

The same applies to the barrel extension and barrel link recess: no fouling, smooth operation of the opening and closing cycle round after round.

In the picture above, a clear view of the LPA adjustable competition sight. It can be obtained with White Dots system, White Frame or plain black.

Above: a good view of the screw-bushing system barrel coupling of the Caracal Lynx 2011.

In this page: the aggressive, mapped design of the slide grip serrations are machined on 3 sides. This profile of the serrations allows flawless control of the pistol at any time and under the most adverse conditions, such as under rain or with oily hands.

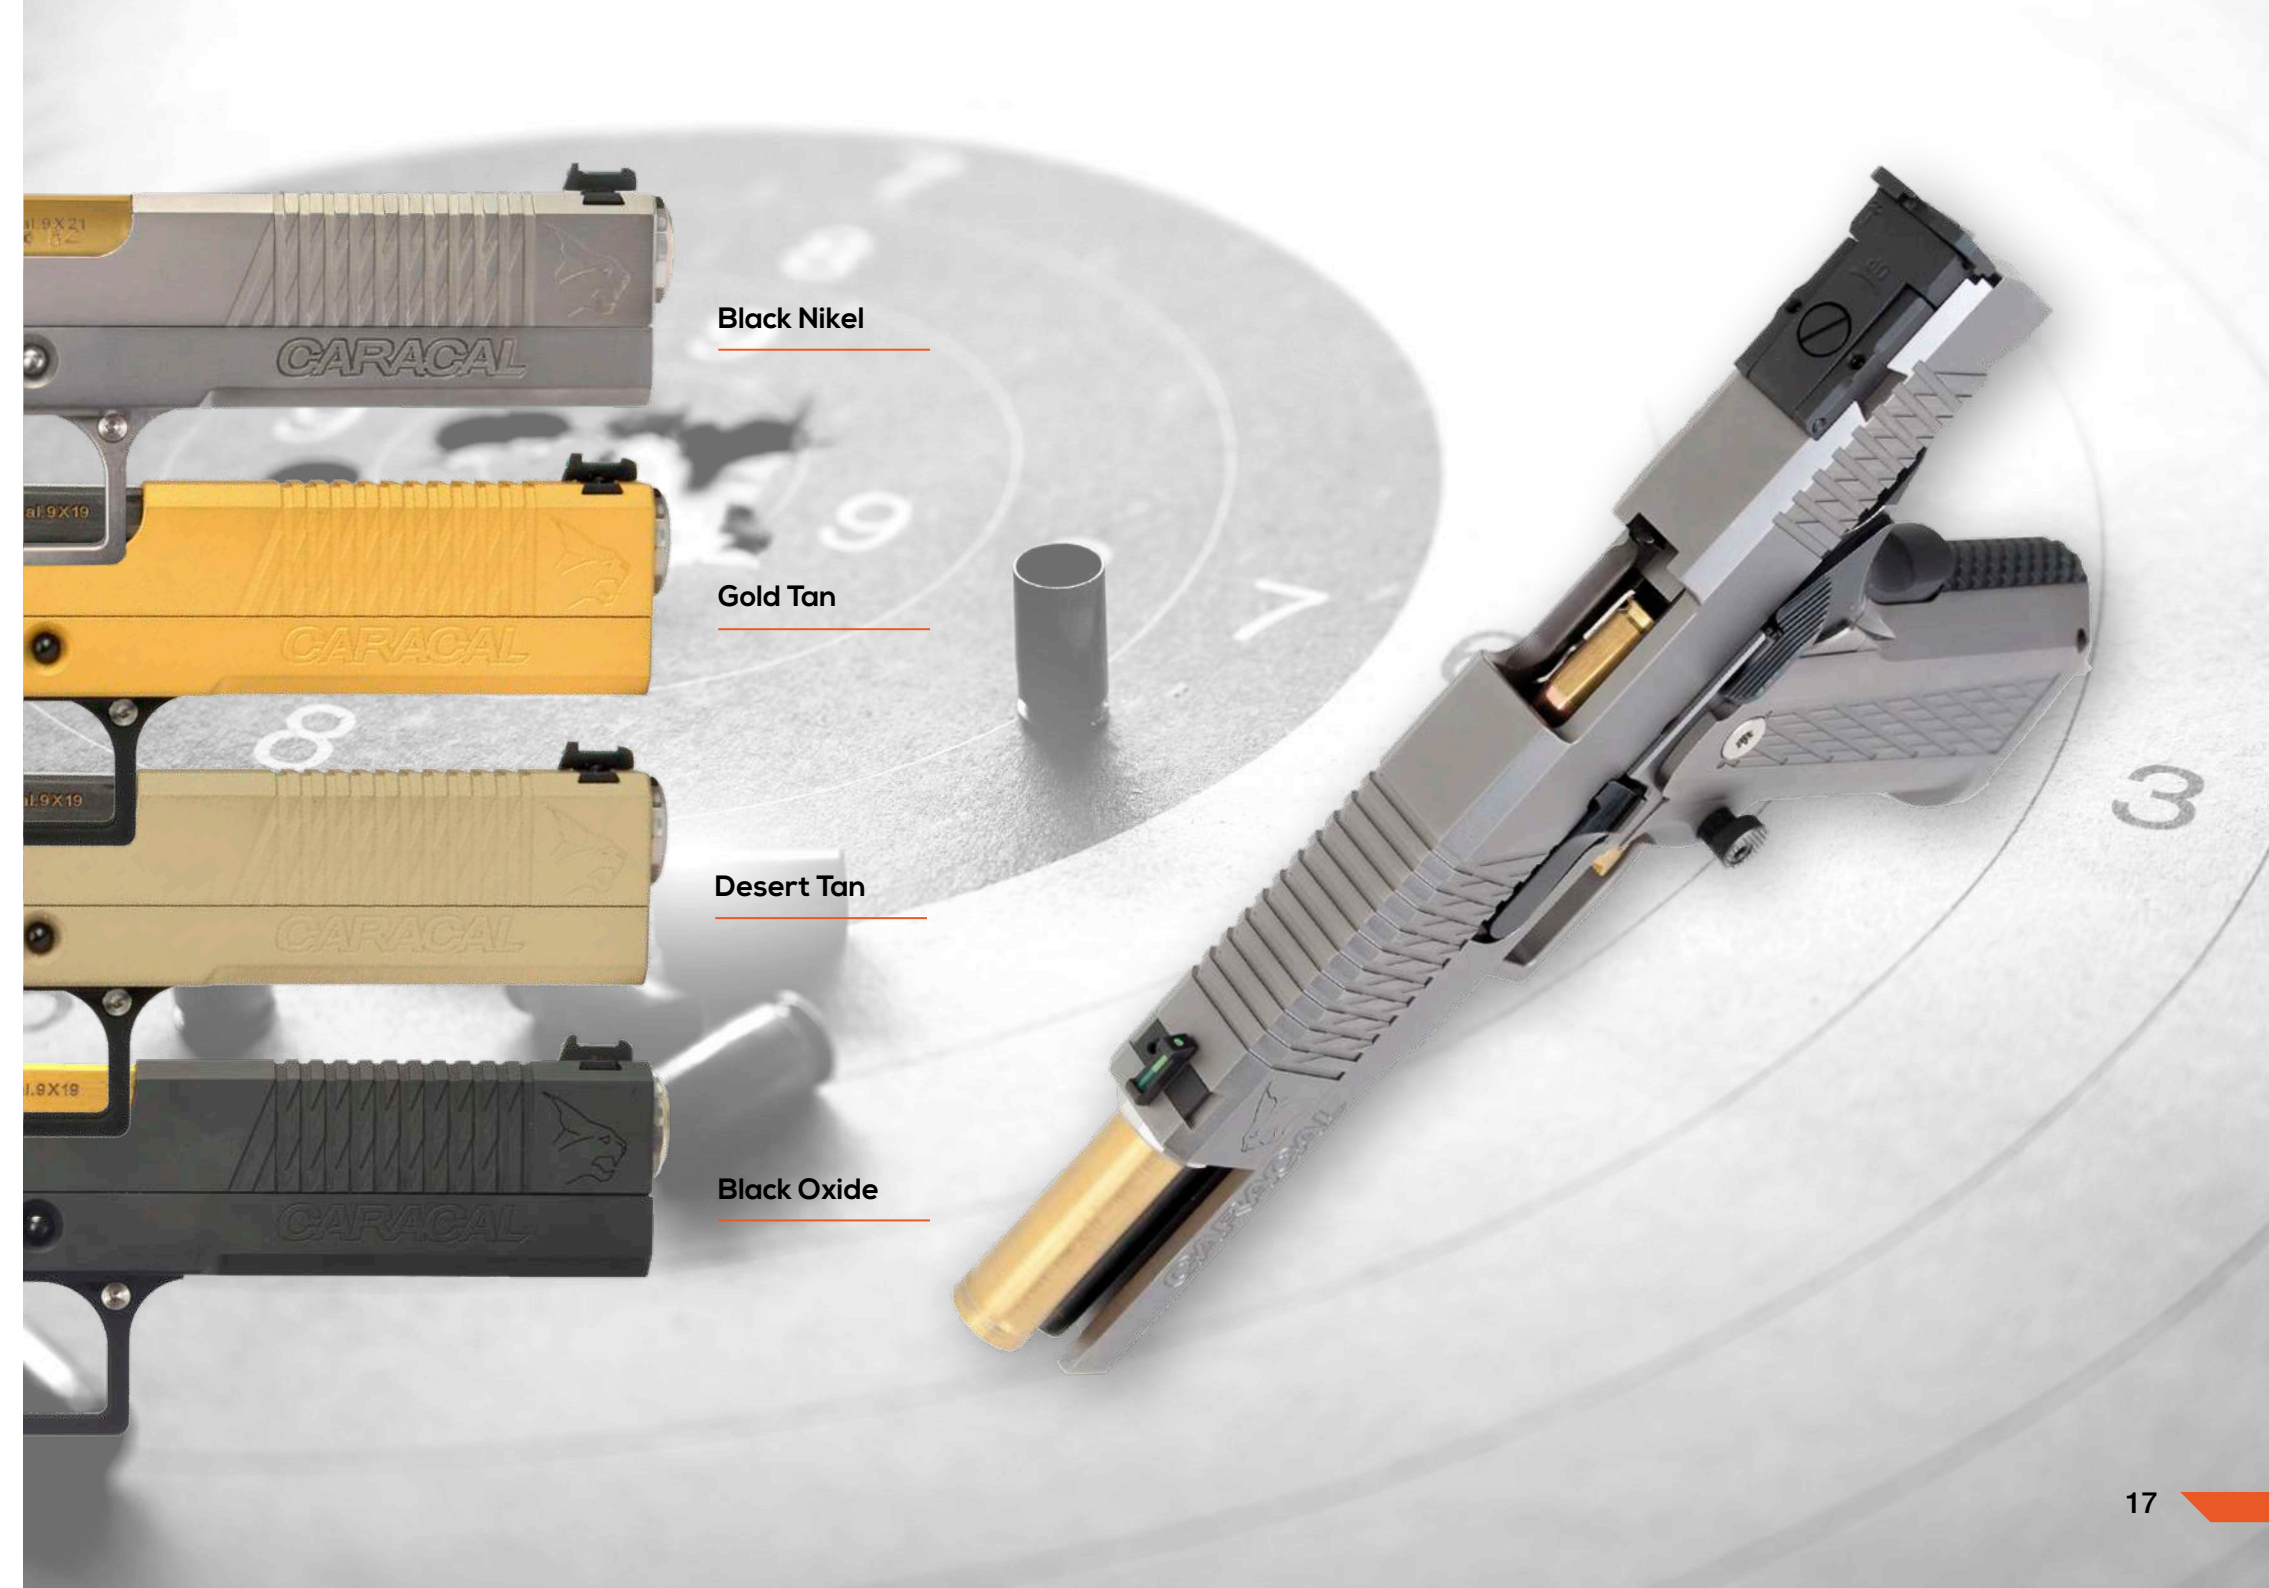

In this page: the long cantilever, Carobronze™ recoil spring bushing, comes as an uncompromising system to both allow back field-stripping of the barrel from the slide and smooth, straight recoil spring operation during cycle.

Laser marking of the Caracal Lynx is done "in the white", to ensure final coating of the parts for an even, oxidation-free result.

## The Integral Phylosophy

Caracal and XDB are proud of offering the new Lynx pistol through a superior manufacturing approach: every single piece of this gun is manufactured from solid billets of the best materials available on the market, mostly on 5-axis CNC machines.

Quality control and computerized storing of stock parts is our mandatory philosophy.

## Loving Care

The hands of our armourers are still unbeatable, to ensure every Carcal Lynx comes out of the assembly line as a potential winner.

Every pistol is checked and assembled and in-house tested with hundreds of rounds, before it goes to the National CIP Proof House for testing and marking.

In the picture below, a clear view of the Colt-Petter modified single locking lug and flat barrel top featured in the Caracal Lynx.

This specific design makes the Lynx as the only one "2011 style" pistol with a lower sight line, flat slide firearms of it's kind ever brought to the world market.
