RAPAX

OWN A RAPAX, OWN A PIECE OF HISTORY.

Humbly but firmly, never in the history of small arms development, a brand new concept and Locking System was born winning like the one embedded in the Rapax line of Pistols.
We took an idea from a dream, to the drawing board, to metal machining and assembly of the first prototype in 2019, and went on to win IPSC match after match, from day one non stop to date.
No other brand new concept pistol has been winning on international level like the Rapax:
almost 100 Gold Medals on about 110 disputed matches in 3 years.
To own a Rapax is to own history.
Time will tell.
We fear no challenge.

RAPAX SPORT

Rapax SPORT

The Rapax Sport is entirely made on 5-Axis CNC machines, with a slide featuring a continuous toroidal fully serrated profile, allowing best grip and operations, with either hand for the sport shooter.

RAPAX SPORT

Revolutionary Locking System

The new line of Rapax Sport and Tactical feature a revolutionary, rotating block locking system, patented in most world Countries. The barrel and block bear an unprecedented minimal weight, for lowest impact on the pistol frame at back stop.

Interchangeable Alloy Grip Insert

All the Rapax Sport and Tactical offer the shooter and operator the Grip Interchangeable Insert feature. This Insert can be Standard or Magnum, to accommodate any hand perfect control of the pistol.

RAPAX SPORT

RAPAX
SPORT

Never in the history of sporting small arms, a brand new patented locking system has been winning from day 1 like for the Rapax Sport. Over 100 Gold Medals on a little more than 100 National level IPSC Matches have been taken in 3 years prior to world launch and marketing of the pistol.

RAPAX THE WINNER

Davide Indizio has been the first IPSC World Class shooter to take the Rapax to the highest step of a National Podium, winning the Optic Division 2021 Italian Championship.

Davide Indizio's well battled Rapax Sport, pictured on the winning day of the Optic Division 2022 Italian IPSC National, after more than 50.000 rounds shot.

RAPAX TACTICAL

The **Rapax Tactical** differs from the Rapax Sport by a full size Picatinny Rail at front underbarrel, slide serrations limited to the portion at the back of the ejection port and fixes sights as standard.

RAPAX TACTICAL

- Desert Tan
- Black Oxyde

A number of finishes are available for the Rapax Tactical: from Total Black, to DLC, to Cerakote™ or a wide array of colours Hard Anodized frame, with Black or DLC Slide.

RAPAX TACTICAL

The Rapax Tactical comes with a notable number of accessories, as for instance 3rd Level Police Holsters, Magazine Carriers, and spare barrel carrier.

These critical accessories were developed and Made in Italy with our trusted partners and are available directly with XDB.

RAPAX TACTICAL

The Tac Trigger is another special feature of the Rapax Tactical and Rapax 2: seamless, continuous ambidextrous smooth radius will supply full horizontal control of the trigger pull even with gloves, without any risk of unwanted engagement on other parts of the trigger guard.

RAPAX II COMPACT

The Rapax 2 "Compact" is a true revolution: all the premium features of the full size pistol, offering a fully machined frame with interchangeable back and side insert grip panel and 13 or 15 rounds capacity magazines (9 mm). Never before all these features were encompassed in one single platform.

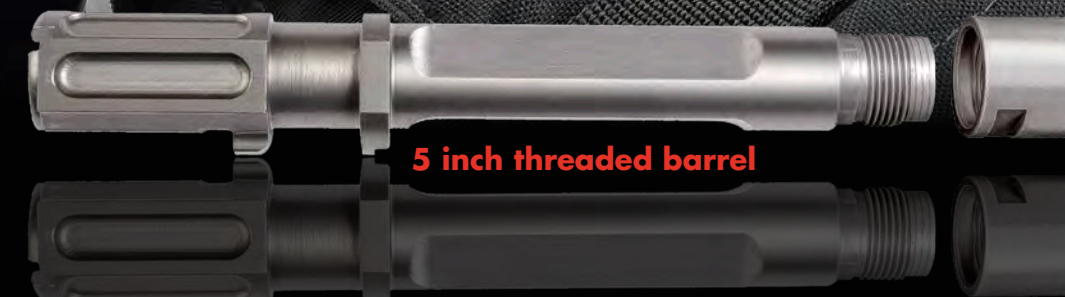

13 rounds magazine

15 rounds magazine

RAPAX II COMPACT

As for the Rapax Tactical, also the Rapax 2 "Compact" can bear a threaded barrel, to mount suppressors, flash hiders or compensators. Unchanged, as per the Rapax Sport and Tactical, remains the choice of finishes or surface treatments of the pistol.

5 inch threaded barrel

RAPAX II COMPACT

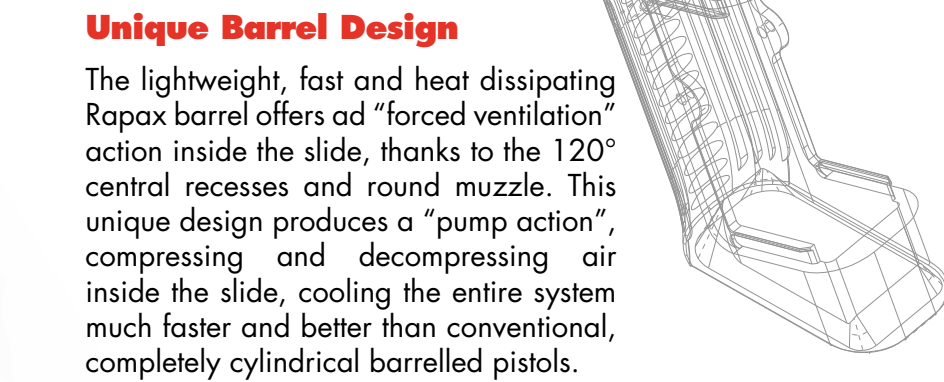

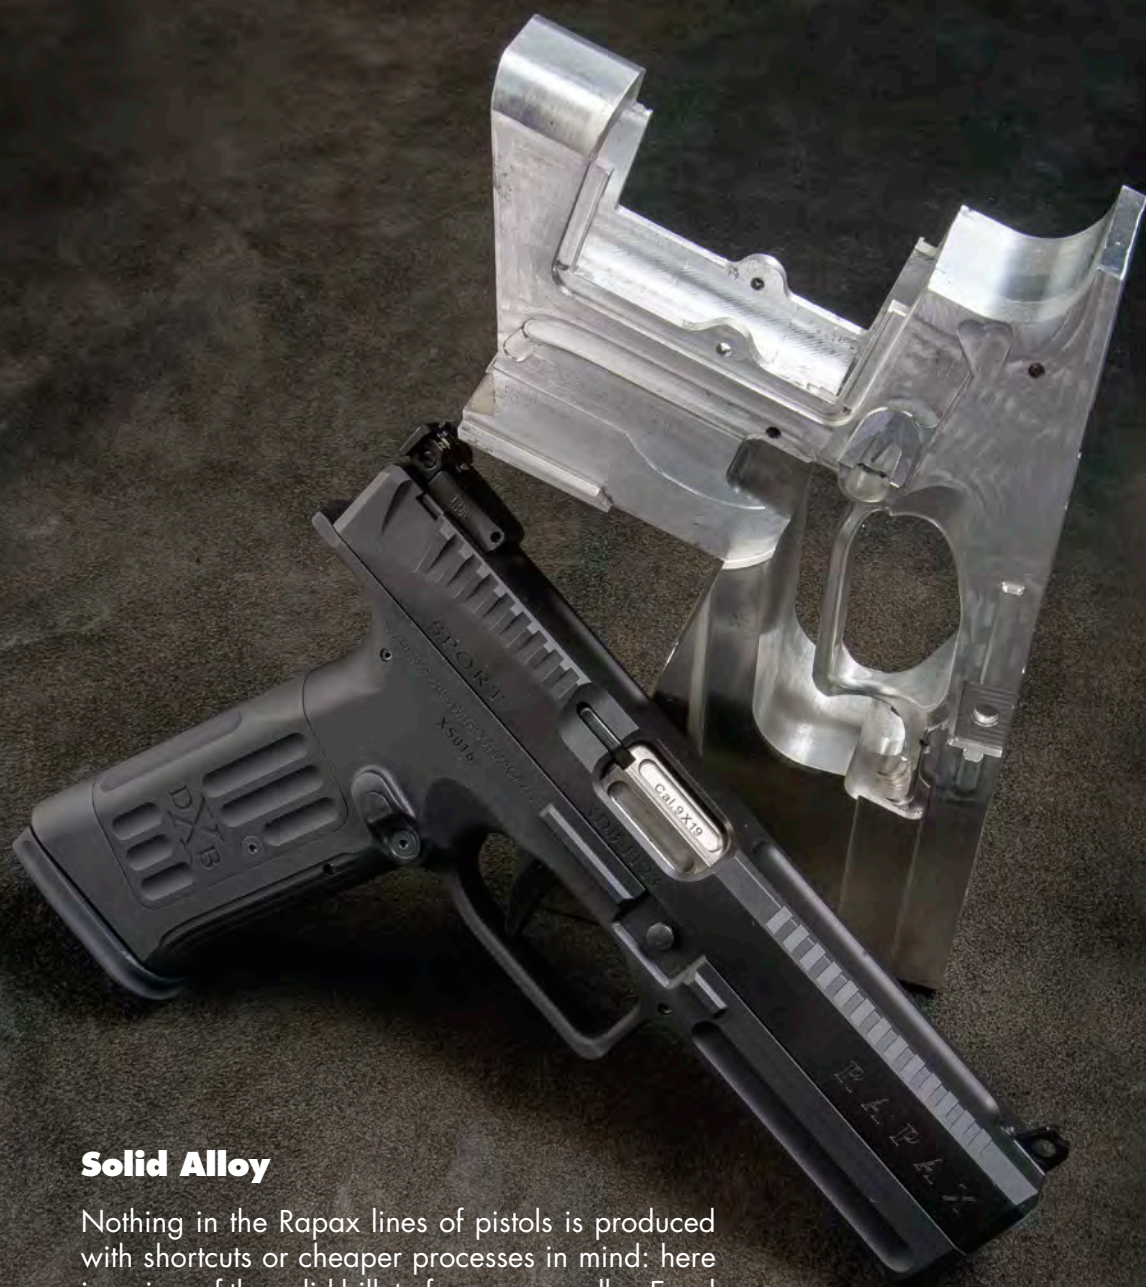

Also for the Rapax 2 "Compact" XDB has developed a notable line of accessories: all the holsters, magazine carriers and duty belts, are available according to the main weapon's colours (for instance Black, Olive Drab, Desert Tan).

DXB

The Rapax 2 "Compact" also encompasses a super-lightweight movement group: barrel and rotating block are vented, for a maximum heat dispersion during fire.

With a simple Allen key supplied with each weapon, the end user will be able to change the **Grip Insert**, according to shooting preferences.

Solid Alloy

Nothing in the Rapax lines of pistols is produced with shortcuts or cheaper processes in mind: here is a view of the solid billet of aerospace alloy Ergal 7075 from which the frame, insert and magazine pad come from.

Our Unique Finishes

In the family picture above, some of the unique Rapax finishes: the Black Nickel for instance, is a hardwearing, very attractive finish, while being visible during sport shooting as well. XDB offers the end user the option to combine different finishes, to create unique pistols as in a Custom Shop.

Interchangeable Grip Insert

All the Rapax Pistols, Sport, Tactical or 2 version, come with a double-rail, self locking Grip Insert, machined out of a solid Ergal 7075 aerospace Alloy billet. The end user can choose from the Slim Standard or the Magnum versions.

Picatinny Standard Rail

The Rapax Tactical and Rapax 2 feature a Picatinny Standard Rail, to couple with most Tactical Torches, Laser Pointers and many other accessories.

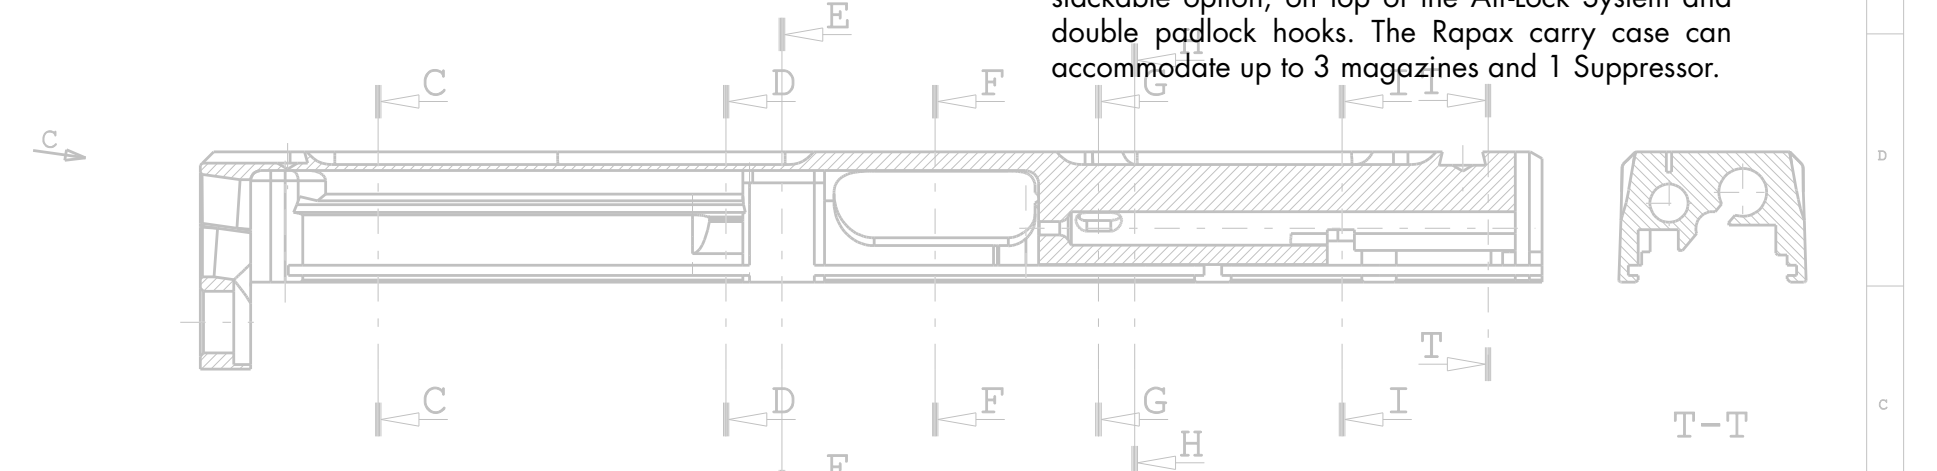

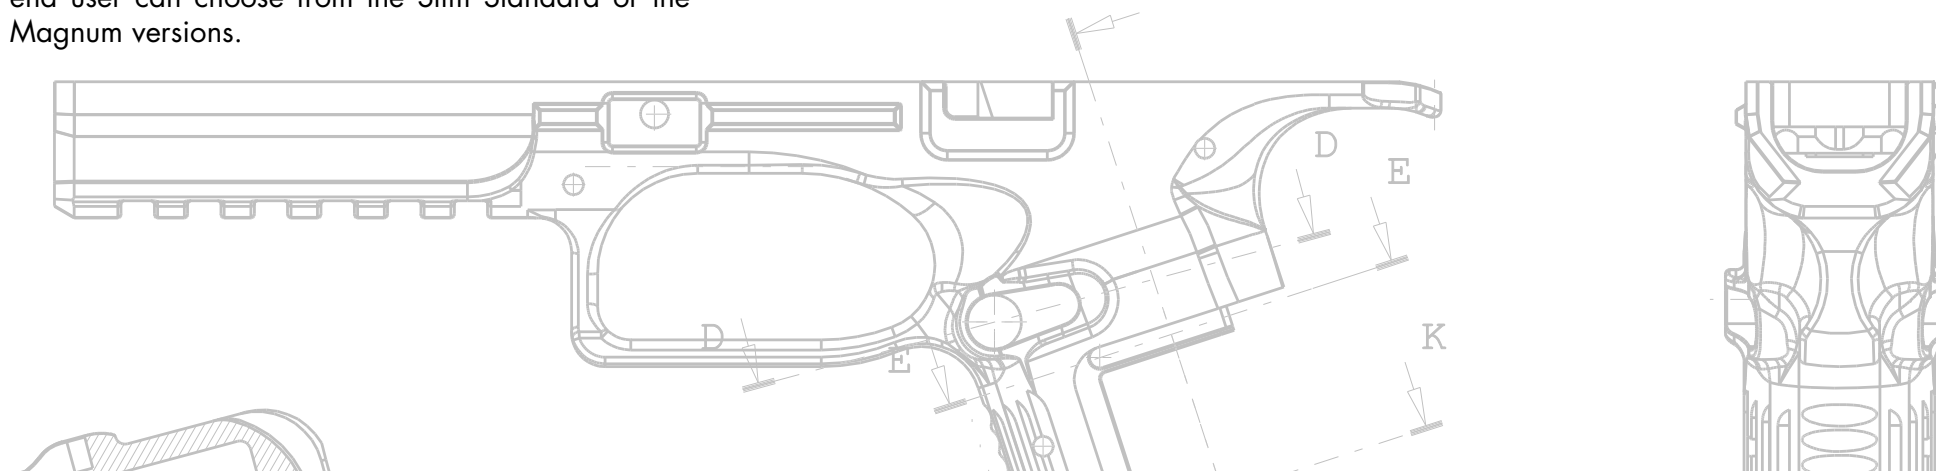

Beveled Magazine Grip Well

In the photo above, the well enhanced Magazine Well, machined integrally to the Ergal 7075 Rapax grip.

Air-Lock Floating Carry Case

All the Rapax line of pistols are delivered with a sturdy, air-tight and floatable carry case. The case features a collapsible handle for easy, multiple Law Enforcement stackable option, on top of the Air-Lock System and double padlock hooks. The Rapax carry case can accommodate up to 3 magazines and 1 Suppressor.

Adjustable rear sight

The Rapax Sport bears as standard an LPA rear adjustable sight. The rear adjustable sight is coupled with a green, optic fiber dot front sight.

Rear 3-Function Slide Plate

The Rear Slide Plate of the Rapax, offers 3 distinct functions: serrations for emergency slide control during operations, tactile-visual firing pin check and ejector guiderod holder.

Fiber optic front sight

In the photo above, the Optic Fiber green Sight: the advanced design features lightweight, thanks to a transversal hole which cuts the weight of about 30%, avoiding loosening of the sight positioning screw, even after thousands of rounds.

Fixed rear sight

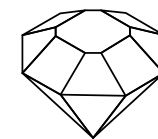

Above, a clear view of the fixed rear sight borne on the the Rapax Tactical and Rapax 2. The toroidal slide grip mapping is also clearly visible.

DLC

DIAMOND LIKE CARBON

DLC is an innovative multipurpose coating that exploits two chemical properties of Carbon: the typical hardness of diamond (hence the name Diamond Like Carbon) and the ease of flow of graphite. Thanks to this combination of properties exceptional, it is the high-tech coating based Carbon with the highest performance for the most exclusive Rapax Pistols. The DLC is available upon request for Slide, Barrel, Underbarrel, Firing Pin and Sear.

Superior Components for a Superior Pistol.

At XDB we work with loving care to produce really superior pistols. All our components are quality controlled at least at 3 different levels.

Even when ordering a spare or replacement, will trigger a tracking process to the individual Serial Number, to make sure the end user will enjoy the original quality for decades.

SPECIAL CONFIGURATIONS

The Rapax Tactical offers a unique feature: the conversion to a real Carbine, by implementing the 300 mm (12 Inch.) barrel, available in both threaded and plain versions. This feature turns a pistol, 400 Mt.Sec 9mm velocity configuration, to a 500 Mt.Sec. 9mm velocity configuration in under one minute. The **ERP** (Extended Range Pistol) platform, with Fab Defence Roni attachment, offers true accuracy and effectiveness up to 200 metres.

ERP

SPECIAL CONFIGURATIONS

The Rapax **ERP** comes with a hard carry case, with 2 standard, 17 rounds magazines and 2-20 rounds increased capacity magazines, Tactical Sling and long bore cleaning kit. The Rapax Tactical can also be implemented with the ERP without the use of the long, 300 mm barrel, working, for instance, at very close quarter combat with folded stock.

12 inch Barrel

SPECIAL CONFIGURATIONS

XDB offers the Rapax Tactical and Rapax 2 "Compact" with an impressive line of modular Suppressors, for any caliber in use with the pistol. This line of suppressors allows change in overall dimension, being built with modules which can be added at leisure, according to caliber and projectile in use.

SPECIAL CONFIGURATIONS

The **XDB** Suppressors have a spring-loaded movable rear end and a flash-hides-compensator front crown, becoming very effective under a number of sensitive uses. Colours and surface finishes of the Suppressors can also accommodate for the main weapon colours and finishes.
